BUSINESS SUPPORT

OUR OFFERS

Conception

The conception phase allows you to express your ambitions, your needs, and your organizational and regulatory requirements that will be transliterated through functional specification. It is a creative step: the main objective is to conceive a system and functional processes which meet your needs while taking into account legal and technical constraints.

Data Migration

Data management is one of the major problems during the implementation of a tool or solution change. Data recovery involves retrieving existing data and processing it before loading it to a new system. A data diagnosis and a recovery strategy must be established to ensure a successful data migration.

Deployment

The deployment phase is the final phase of the software development and puts the product into production. The overall challenge is to provide a stable solution which meets your expectations, while providing support to users. They must develop their skills and take ownership of the tool.

Acceptance Test

The acceptance phase helps identify malfunctions and ensures that users have the right match between expressing their needs and the target solution. Thus, this phase corrects the imperfections noted during the acceptance test. The objective is to measure your level of satisfaction between the delivered outcome and the target outcome.

Interfaces

The interfaces allow you to understand the integration techniques between your internal systems and your new tool. This phase is crucial to ensure that the configuration emits flowing communication between your tools. It is important to look at the integration techniques to define a schedule involving the right interlocutors, before you can deploy the interface and control its proper functioning.

YOUR BENEFITS

Retrieve **quality data**

Ensure the **completion** of your project

Benefit from our **business and project expertise**
